

Proteus Waterproofing

Case Study: Pro-System

Roof Refurbishment, Homesearle House, Goring-by-Sea

Project Brief

At Homesearle House, a retirement and sheltered housing residence on the seafront in Goring-by-Sea, Proteus Waterproofing supplied its Pro-System seamless waterproofing system to provide long term protection for a series of flat roofs. The residents required the roof works to be carried out with total safety, minimal disruption and noise.

Key Requirement: Health and safety

Working on occupied buildings, particularly healthcare and education, safety is always of utmost importance. Proteus liquid applied systems are cold installed and met all health and safety criteria to work on these occupied buildings and minimise risk of fire. The low odour application allowed the Proteus Licenced Contractor **Clarke Roofing Southern Ltd** to work safely and with minimal disruption to employees and residents.

Key Requirements: Seamless waterproofing

Due to the complex nature of the roof, Proteus Waterproofing worked in close partnership with **Clarke Roofing Southern Ltd** to successfully deliver the project to a very high standard. The roof has been finished with a high performance, low maintenance and seamless Pro-System waterproofing covering.

Key Requirements: Long Term Performance

Pro-System offers a low maintenance, durable waterproofing and protection solution to a range of buildings. Proteus Waterproofing roof systems come in a range of 10, 15, 20 and 25 year options.
