Why Singapore ??

Singapore, an island city-state off southern Malaysia, is a global financial center with a tropical climate and multicultural population. A key driving force for economic competitiveness, science will become imperative in the years to come. The management of fundamental resources like water, energy, and food will grow more important than ever with Singapore's limited natural resources. It would be one of the biggest challenges and among the most promising areas of technological growth over the next 10 to 15 years. Let's look forward to unveiling new initiatives and solutions that will help the nation in achieving its goal of becoming a smarter nation.
